

MEASUREMENT & NUMBER STRATEGIES

Stage 5-6

A rugby field is 100 metres in length and 70 metres wide. Redraw the rugby field below to work out the following questions.

- Colour an example of a right angle on the rugby field?
- Colour an example of parallel lines on the rugby field?
- Colour an example of perpendicular lines on the rugby field?
- What is the distance of a drop kick from one 22m line to the other 22m line?
- What is the distance from the 10m line to the nearest goal line?
- If you ran the whole length of the field 12 times, how far would you have run?
- If you ran twice around the whole field, how far would you have run?
- From the goal line, if you ran to each line and back, like a shuttle, until you got back to the goal line, how far would you have run?
